What is Consciousness ?

Consciousness is the mind's memory and its activity. We can see the activity of consciousness with a scanner, but we cannot materialize consciousness. So it seems that it is in another universe.

In the same way, we do not know how and why the body is ordered. We see waves ordering the body but we don't know where they come from. DNA and water produce waves. But it is about matter that should be inert, because there is no wave producer in matter.

So, like the universe, a soul takes care of our body. Our consciousness is in another universe and we will see our consciousness when we die, having gained wisdom during our life.

My Notes

Look for recent discoveries about the brain.
